

BED ASSEMBLY INSTRUCTIONS

Beds purchased from Scott Jordan Furniture

Tools needed:

Flathead screwdriver
Allen wrench (provided)

Hardware included:

8 Bolts
8 Cross-dowel nuts
4 Black spoons

Parts included:

1 Headboard
1 Footboard
2 Side rails
1 Slat roll
1 Center support rail and screws
(queen, king, California king)

Directions:

1. Place headboard upright near its desired placement.
2. Insert cross-dowel nuts into each pre-drilled hole in one rail, leaving the screwdriver slot showing. ⊖ Turn each cross-dowel nut so the threaded hole lines up with the hole in the end of the rail. The rails will be installed with the ledger strip closer to the top of the rail.
3. Working on one side of the headboard, insert 2 bolts from the back of the headboard, going through headboard and into end of rail and into cross-dowel nut. Use the Allen wrench to lightly tighten.
4. To attach footboard on the same side, insert bolts through the footboard into the end of the rail and into the cross-dowel nut. Lightly tighten the bolts. Repeat this process to attach the second rail.
5. Now that all four corners are in place, firmly tighten all bolts using the Allen wrench.
6. Place the four black spoons in holes on slat support ledges.
7. Queen, king, and California king: slide center support into slots on headboard and footboard. **see back for further information**
8. Place slats on rails and hook each end slat over the black spoons to prevent movement.
9. Place mattress on slats.

Wood naturally expands and contracts potentially causing bed connections to loosen over time. This expanding and contracting process is a natural characteristic of wood. Tighten hardware occasionally to restore the bed to original stability.

Center Support and Optional Center Leg

All queen, king, and California king beds are provided with a center support rail and screws, and optional center leg for the support bar. For most bed configurations, the center rail slides into the slots on the headboard and footboard.

Note: while moving the bed with the center leg attached, be sure to pick up the sides of the bed so the center leg is off the floor as it can twist and break the center support if dragged across the floor.
